output	.png	-	-	optional	p.5
screensaver	.png	1920 x 1920 px	2Mo	optional	p.6
background image	.png	1920 x 1920 px	2Mo	optional	p.7
background color	hexa	#XXXXXX	-	mandatory	p.8
primary color	hexa	#XXXXXX	-	mandatory	p.8
secondary color	hexa	#XXXXXX	-	mandatory	p.8
font1	.ttf	-	1Mo	optional	p.9
font2	.ttf	-	1Mo	optional	p.9
font3	.ttf	-	1Mo	optional	p.9

01.

LOGO

Logo will be used by default on the screensaver(A) automatically at the bottom right of the screens(B) (see examples below).

This file can be disabled from the screensaver and replaced with the screensaver file if you want a more customized screensaver.

We recommend you to center the logo in the template and make sure the safe area of your logo is respected.

Logo must be placed on a transparent background.

Template to use: logo.psd

File size: 1920 x 640 px

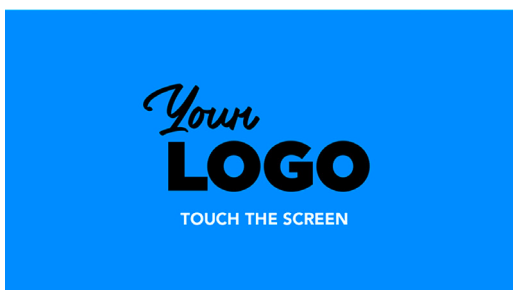

File extension: .png

Template
logo.psd

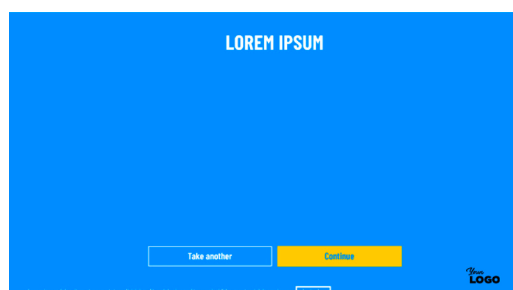

Final file
logo.png

Render on the screensaver (A)

The logo appears in the middle of the screen.

(B)

The logo appears in the bottom right corner.

02.

HEADER

Header will be used on top of the emails received by users.

Template to use: header.psd

File size: 1160 x 300 px

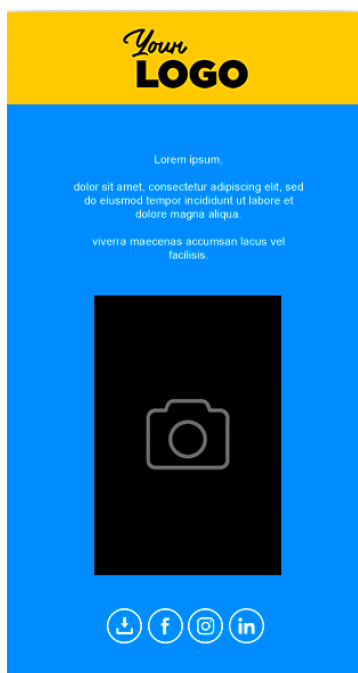

File extension: .png

Template
header.psd

Final file
header.png

Render on the email

The header appears on top of the email.

03.

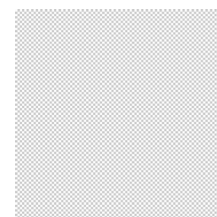

OUTPUT

Output will be used to give you a preview of what the photo will look like on the screens. Put your photo design on, whatever format you picked, to get this preview.

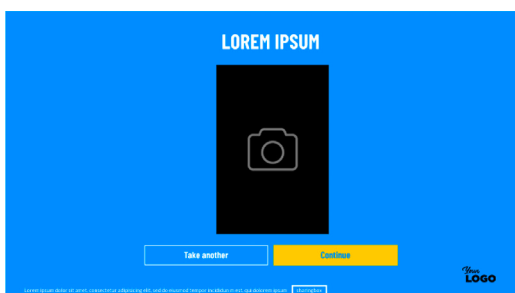

The photo design needs to contrast from the background.

This file is for preview purposes only. It does not exempt you from choosing a photo layout for your client and designing it.

Template to use: output.psd
File size: 246 x 246 px

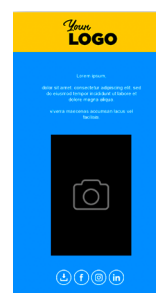

Template
output.psd

Render on the screens

The output appears in the middle of the screen.

Render on the email screen

The output appears between the text and the photo share/download icons in the received email.

04.

SCREENSAVER

The screensaver will be used as the first screen visible to users, prompting them to touch it to begin the experience.

This file is optional. Your logo file is used by default as a screensaver with your background color.

In case you want to customize it, we recommend leaving the “touch the screen” text and making sure it is legible and quickly understandable by the user.

You can customize this screen with a background image or color.

Do not delete or edit the black strips all around the file.

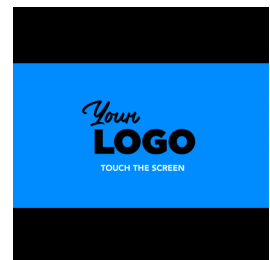

Template to use: screensaver.psd

File size: 1920 x 1920 px

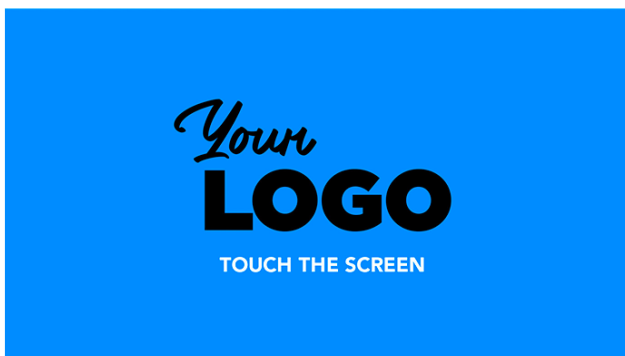

File extension: .png

Template
screensaver.psd

Final file
screensaver.png

Render on the screensaver

The design should appear in the first screen, without the black stripes.

05.

BACKGROUND IMAGE

Background image will be used as the background color/image that the user will see throughout the user experience (except on the screensaver).

This file is optional. The background color is used by default for all screens.

If you want to customize it, we recommend ensuring the information is legible. If possible, opt for a simple color.

Do not delete or edit the black strips all around the file.

Template to use: background_image.psd

File size: 1920 x 1920 px

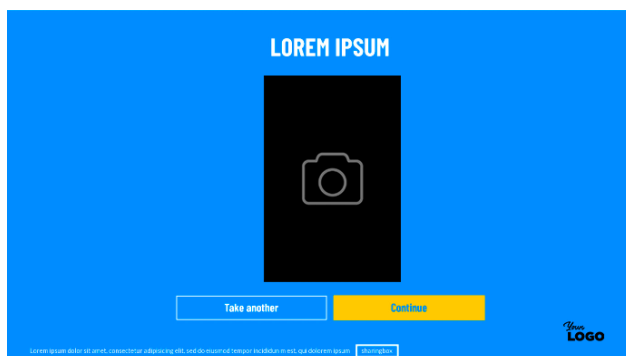

File extension: .png

Template
background_image.psd

Final file
background_image.png

Render of the background image on the screens

The background image appears in the background of every screens of your event (except on the screensaver).

Your logo file always appears on top in the lower right corner of screens.

06.

COLORS

You need to define 3 colors for the user experience.

Use the look&feel.psd document to visualize the render.

Background color

Default color background for the screens and the email.

In the exemple : **#008aff**

Primary color

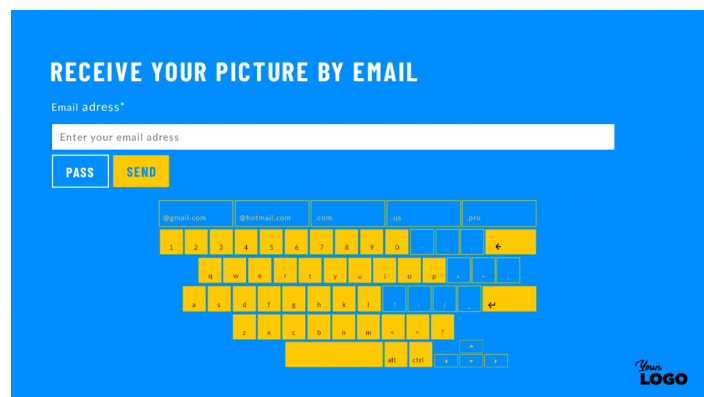

Color of the validate buttons.

In the exemple : **#ffcc00**

Secondary color

Color for the texts and the cancel buttons.

In the exemple : **#ffffff**

	Background color #008aff
	Primary color #ffcc00
	Secondary color #ffffff

Render of the colors on the Look&Feel

These three colors will appear on every screen of the event.

07.

FONTS

You need to provide 2 fonts. One will be used for the titles and the other one for the paragraphs. You have to rename the two selected fonts “font 1” and “font 2” (A).

The fonts must be in .ttf

font1

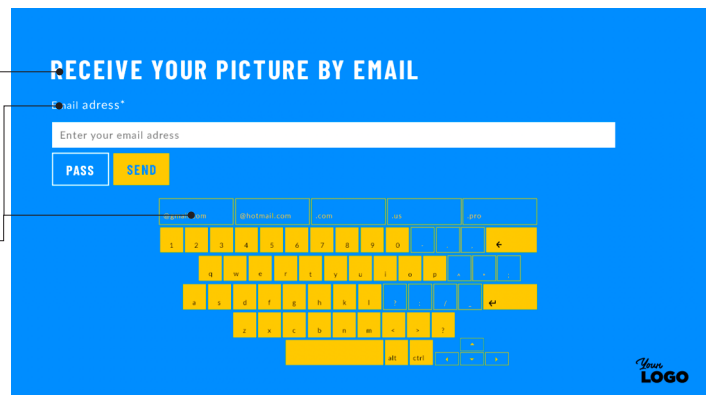

This is the font used for the main texts (titles).

font2

This is the font used for explanation text (paragraphs & legends).

font3

This font is used to allow the user to add text to their photo (provided you have configured the user tag option).

A Avenir Black.ttf
A Avenir Book.ttf

>

A font1.ttf
A font2.ttf

Fonts before/after renaming (A).

You have to copy/paste your fonts and rename them.
